Hi guys,I'm putting together Dave Cope's three ways and need to know how small an enclosure the 10" JBL's can live with within the bass cabinet for the 15" TAD drivers. I don't want to use up more of the bass cabinet's volume than neccesary. I was thinking of a box with an internal volume of .42 cu. ft. Is this too small for the JBL 10"? I think maybe Bill M. might have advised on this but I can't find any record in my notes.Thanks!Garland
