Hey everyone. I originally wanted the JBL 2226H to cover 70Hz-300Hz just as a direct radiator (I think it is suitable for this range). These drivers cost a lot though, but I've found something that might work, so I will ask here first. I can get JBL 2225 basket/diaphragms. I can't get any 2225H recones though, but I can get some non-genuine JBL 2226H recone kits. Will these fit in the 2225H baskets? If so, will it then technically be a 2226H? Any advice is greatly appreciated! BTW: How good are the aftermarket/non-genuine recones? Are they much the same as the originals? I can get ONE original recone here in Australia, but I need a pair so I would get a pair of non-originals (they are also a bit cheaper). Thanks! Adrian
