If you go any bigger than 4ft³ with the TAD 1602, you'll need to make an EBS alignment. That's a good option - especially for a subwoofer - but it does mean your output below 100Hz is generated at reduced levels, in a reduced "shelf." That's why the alignment has the name - the response is prodigious bass using a motor chamber of 3.85ft³ tuned to 38Hz.
