Hi, I would like to thank Bill Martinelli, J Lapaire, Steve F, and Wayne Parham for their input on my question. I came up with the answer with their help. I'm going to get the sewer pipe out of my apartment and have already ordered the 3 cubic foot enclosure that Parts Express sells made for the Titantic. If you guys read this I say many thank yous for your time. I do have one more question, What would you stuff it with, Dacron, loose or tight, or egg crate foam as I did in my mini monitors that I built with Woodstyle 602 and variovent. Thanks, Mark.
