Hi Wayne, I've been thinking about your corner horn design, and theone thing that's been bugging me is that as designed, the soundwaves are being focused into a corner, then reflecting past eachother to be sent into the room around the sides of the cabinet.Can you comment on placing a wedge in the corner as a reflector?I've attempted a top view ascii version below. Assume everythingis at 45/90 degrees and the point of the wedge would be againstthe baffle board.Thx, Chris
