Subject: Re: rear chamber access Posted by Adam on Thu, 10 Jul 2003 23:54:20 GMT View Forum Message <> Reply to Message

I haven't messed with it much yet, but it occurs to me that a soldering iron with a melting tip would be good approach. Not as difficult to handle, probably give you a cleaner edge or as clean and if you happened to make contact with the diaphram by accident, you wouldn't do any damage as long as you didn't hold it there for a long time... Whereas with a cutting blade or whatever, you're screwed!!Just a thought.Adam
