Thanks! I've found that if I dont use the mass loading ring at all, then reconing the 2225 basket with a 2235 actually makes a 2234 lol. And the 2234 has 23Hz Fs, so thats not bad considering the 2235 has 20Hz fs. But I think I'll go for the completely assembled 2225's instead because they have original recones, even though its 2225, I think I'll be happy still. I found a place which has genuine recones here in Australia, but they are \$395 each and the non-genuine is just \$200 each. Almost double the price. So I think its wise if I just go for the pair of 2225's all assembled which I luckily found, and they use original cones. Thanks again!Adrian
