I am intersted in making a Billie 300b amp., but my current speakers B&W matrix II are probably not a good match. I posted on the SET list and most people thought the B&Ws wouldn't work well. Searching the archives I sort of narrowed my sights on these speakers. Can any one relate their experience/impressions of these speakers with low powered SETs. How do they sound tonally? Is there enough bass response? I primarily listen to classical and jazz. My classical listening includes symphonic and well as chamber music. Thank you in advance. Michael
