---

I currently have an amp (I know how to power it) it is a car stereo amp. I m trying to hook up a car subwoofer to my receiver. I hooked the L+ and the R- to the subwoofer on the bridge and hooked the high input to the hifis on the reciever. But all that comes out is little bass and lyrics. I want the subwoofer strictly for bass so it gets a lot of power. any ideas? Also does anyone have any extra car audio stuff?? (subwoofers, amps, etc!) I need stuff for my car!!!! Thanks
