contained the JBL 2115J if you'd like. I'd be happy to scan the file and E-Mail it to you. The cabinet was aligned as per PiAlign, and so the cabinet is small - 0.66ft³ as I recall - and the port had to be mounted diagonally to fit in the box. For different applications, I also installed 2115's in 1ft³ and 2ft³ cabinets with good results. Each of these cabinets was tuned to approximately 45Hz.
