I have an orphaned (Stephens) 8 ohm Trusonic Full Range Speaker Free Cone Instrumental model 120G I was told is a great Bass guitar driver. Is there a generic style guitar cabinet design, maybe a scoop style, that can use a single 12? Aren't some instrument enclosures "open back", which makes me wonder, what kind of enclosures would be better for a DIY effort? Or maybe to maximize protecting the driver from overexcursion, should it go into a BR tuned to it's Fs? Sam
