Hi folks, I'm rearranging the house and I'm rotating some speakers out. I have a great pair of oak veneered cabinets that are 3.5 cubic foot. They are perfect for an easy Pi4 build up. I have them cut for 2226Hs but other 15s should be easy to refit. The horn-mounting baffle is removable for easy refitting with PI4 tweeter horns and port tunings. They have nice simple bracing and are in very good condition. Construction is 3/4" MDF with oak veneer and oak corners, very much the same as Woodstyle boxes. I bought them from MCM Electronics about 1997. The original double-boxed shipping containers are included. With these boxes, a kit, a nice Saturday, a few tools and a PI4 can be up and running just in time to fire up the grill!!
