Choice-a labsub with ONE lab12,-or a labsub with ONE lab12 + flare extensionor--my own basshorn with lab12wooferi know the labsub is the best way to go,but will be abit wobbly response if its used as a sofa NEAR not in proper corner position..i can only afford ONE lab12 per box,dont need PA levels of output and wont be using 2kw.should i take the hard road and use my own LONG horn ? its hard to optimise internal volume :-Sthanks
