butts off with Billy Idol this am. Couldn't get 5 minutes into the first track before the voices inside my head were clamoring for "more power captain!". The long term quasi-4 Pi's and MC-240(pp 7581a's) are rocking the roof off at about 95dB peaks, probably still under a watt:)What DOES one do when they realize after over a year and a half that the speakers being used are EXACTLY what synergizes superbly with the electronics used, either sand or tube, and suit almost all the music I enjoy(asleep at the wheel to Wagner). No tone controls, no EQ. And playing the Pi's means one set of jbl4748a/511's/902 altecs of the biamped system sets IDLE COVERED WITH BLANKETS! the humanity...Sam
