Hi Folks,I made a single 4Pi box some time ago, and now I want to use it forbass guitar. I've already bought carpet from PE to cover it, butcan't think of a good way to do a nice job on it. Does anyone havesome suggestions on how to accomplish this? The front will get grillcloth, and I'm planning on black metal corners from PE. I was goingto use 3M super 77 for the glue.Thx, Chris
