Wayne, which Pi speaker could I build with either the JBL 2118J or the 2123J?the 2118J is 16 ohm 97 dbthe 2123J is 16 ohm 101 dbI understand the 2123 is more of a midrange driver, but I have subwoofers so deep bass is not a concern.Which tweeters could I use? Is there an opportunity here for a crossoverless design (the 2123, specially, falls off a cliff after 5K Hz)?Thanks, Al Lau
