The Alpha series are Eminence's lowest price offering. But they have some unusual benefits besides their low cost. You mentioned one of them here - Open baffles are a good option for Alpha 15's. When put in a cabinet, the volume must be huge. Another benefit is their nearly perfectly flat impedance curve. They generate practically no back-EMF, and so are well suited for use with tube amplifiers having low damping factors. But again, they really need "room to breathe," and require a cabinet larger than 10ft³. Personally, I think Alpha 15's have a nostalgic sound, probably due to their their relatively small magnet and their cone shape. Reminds me of what was in console stereos in the fifties. Also, they aren't electrically damped as much as most drivers, and so they are ideal for sound systems that can't provide much electrical damping - such as low power tube amps. They already have very high Qes, so low damping factors are pretty much "water under the bridge." All-in-all, they're an interesting part and very popular for Eminence. The most popular 15" woofer here is probably the Delta 15, but the nostalgic sound of the Alpha 15 makes them pretty popular too. Just be sure that you use a Zobel with them and don't run them "wide open." For subwoofer use, crossover below 200Hz; As a midwoofer, don't go above 1.6kHz. And when used as a midwoofer, the Zobel becomes extremely important. This is the

nice tube amp, will take you right back to the 1950's, just like "American Graffiti."
