yeah the 2226 is supposed to have 3inches radius airspace around it..i can optimise it further im sure!40hz response attached.(my corner horn)the 25hz one will be impressive but i dont want any part in construction!hahai can optimise my one further,using 4 conicals to flatten response,but i may not bother.its already more flatter than my main speakers ...only 34cm depth internal!i think i maybe in heaven when its finally built :-)Cheers!
