Subject: corner cabinet design question

Hi guys!I have a question for Wayne and possibly others. I'm wondering if it would be possible to shorten the middle section of the corner horn to decrease the overall depth of cabinet. I'm not sure how much effect the speaker driver to corner apex measurement has on the function of the conical horn. Is the prescribed design a matter of design symetry or acoustics? How much tolerance to design deviation is possible without acoustical penalty? Thanks! Jerrod
