I'm going to build a premium stage 4 pi but wish to make it as short as possible. The standard size will cut in front of my projection screen - standard size is 26x18x14I was thinking I'd make it 18" high and put the horn horizontally beside the woofer - so the box would be about 18 x 34 x 14 . I can enlarge the port for the extra volume but does anyone see issue with the horn centered with the woofer?thankscraig
