Subject: same speakers Posted by canjie on Mon, 08 Dec 2003 16:29:31 GMT View Forum Message <> Reply to Message

Hello PeopleMaybe this question sound's stupid too you but I really want to know an answer.Let's say that we are comparing two speakers with the "same" T/S parameters:One has for example this parameters: SPL = 100 dB and Power = 600 W, 15"diameter, etc... sameSecond one: SPL 100 dB and Power = 200 W, 15"diameter, etc...sameSo, the only thing different is the Power of the speaker, which is different.What is different between these two speakers besides that first one can handle more power?
