Is this for live performances or home? There's no way you'll need a 1000W, 97dB woofer for home. Pick a dollar figure and surf through the Parts Express web site/catalog and see what you can pick from. PE has lots of choices including the sub amps. Run your picks through the speaker design tools Wayne provides and pick the one that best matches your needs. I bought the 250W, non-remote amp for use with an off-model Eminence 15" I bought on eBay for \$35, and I'm sure it's not getting more than 20W-50W, and it drives us out of the room. Chris
