BoxPlot will accept either values and I think if you switch betweensystems, it converts all the fields automatically. As for haulingthese, I think you should look into a trailer unless an Audi 80is a station wagon. :^) Parts Express has a speaker selectorwizard on their web site. You enter your usage, size, box size,etc, and it gives you a list of speakers that are close. At leastit narrows the list down. To keep the size down, consider some12" drivers.Chris
