Hi Guys! (Hey it's me Garland)I was wondering what you all knew about any horns designed for loading the corners of a room in the vertical direction as opposed to between the wall and the floor as I believe(forgive me if I'm wrong) Wayne's Pi 7s do? I'd love to try some true bass horns but space just does not allow for the free wall/floor space. Any ideas?Thanks and I hope to see a few of youse guys at the N.E.Valve Bottlehead, Tube, Hi E., whatever, Beef Blast at Steve Culton's on the 24th.G.
