Aside from the cabinet and power amp, can you describe any othercharacteristics you are concerned with? I'm at least familiar withthe Karlsons, and from the web site there are several driversrecommended. By digging up the T/S specs for those, you can searchfor current drivers that are close. You can also model the driverslisted, find a standard tuned box they'd use, then search for a currentdriver that has similar characteristics. Wayne uses several differetEminence models as well as the professional JBL's. Try thosecompared to the listed drivers.Chris
