Hi Wayne, For the 4-Pi's I'm going to start shortly, I ended up getting Selenium 25-25 horns. Similar to the ones you recommend in dimensions, etc. While trying to pick a horn, I noticed that similar sized horns were rated for pretty dis-similar cut-off, and at the same time, some rather smaller horns were rated for what seemed like pretty low cut-off. Aren't those specs pretty much dictated by physical dimentions related to the size of the soundwaves? Any explanation for the spec games? BTW, the Selenium horns are nicely finished, heavy dead aluminum, with a nice wide rim (as opposed to some complaints I've seen about one or the other 1" horn you specify). I'll post more once I get things hooked up. thx, Chris
