Hi Wayne, For the 4-Pi's I'm going to start shortly, I ended up gettingSelenium 25-25 horns. Similar to the ones you recommend in dimensions, etc. While trying to pick a horn, I noticed that similar sized horns were rated for pretty dis-similar cut-off, and at the same time, some rather smaller horns were rated for what seemed like pretty low cut-off. Aren't those specs pretty muchdictated by physical dimentions related to the size of the soundwaves? Any explanation for the spec games?BTW, the Selenium horns are nicely finished, heavy dead aluminum, with a nice wide rim (as opposed to some complaints I've seen about one or the other 1" horn you specify). I'll post more once I getthings hooked up.thx, Chris
