Gotcha! I have a parametric EQ and 1/3 octave EQ on the rig, so I could use one or the other to give me the curve. I have both radial horns and CD horns, so I can't just build the compensation in. The DBX 234 crossover does not have the circuit available. I suppose I could build a little outboard box I could patch in to the HF output, but that seems a bit of work. Maybe I'll live with the graphic EQ solution, and save up for a better xover. Thanks for the thorough response- I'll be saving that one. I'll send pictures when I get the traps built. Larry Acklin (putting up the big rig this weekend...)
