For a direct radiator, I'd put a pair of the new MAG12's in the same subwoofer box I recommend for a 2245H. But that's a bit large for what you're wanting. If size is a major concern, why not put a MAG12 in a 50-150 liter box tuned to 22Hz? Or maybe in a bandpass box? That keeps each cabinet small and easy to carry, and you can use as many as you need for the output required. If you need maximum SPL, then go with a horn, but if you need to keep 'em portable, a whole bunch of 100 liter boxes might work better for you.
