The Alpha 10 will work very nicely in a 2.5ft3 box tuned to 40Hz. That's close to the volume of the with it coming online at 3.5kHz, the Alpha 10 is required to work up that high. It does so, and is actually pretty loud at that frequency. So you really want to be sure to add the 0.5mH coil to tame it there just a bit. But I'm pretty fond of those speakers. I'd say go for it.
