I`m still pursuing my high efficiency speaker goal and have just picked up a pair of P.audio drivers and horns to mate up with my 12 inch woofers.
http://www.paudio-europe.com/products/db_product_2_5_pa-d34.htm
http://www.paudiosystem.com/products/db_product_6_14_ph-240.htm . Will i be able to cross these over at around 1k to the woofer and then run them out to 20k or so or should i cross them lower and use a supertweeter. I`m just learning crossovers so i`m trying to keep it simple so far. The Richard Allan woofers are old but respected units but difficult to get T/S specs. I found a post with these
specs:<http://www.diyaudio.com/forums/showthread.php?s=af0104fbd661f87cdc26a6946fa784b5&threadid=33249&highlight=> it`s the CG12 woofer. Thanks, Steve.
