Hi Wayne! I have recently ordered a set of Theater 4 pi's in kit form and had a few questions. First could I get the cabinet plans from you? I don't know if they are included in kit or not. Also, in regards to internal bracing of the 4 Pi's, could you tell me of a good method and what is recommended for stuffing... fiberglass insulation?...what type & or thickness? And finally the last question should the cabinets be made as mirror images of each other? This will be my first try at making speaker cabinets so please bear with me for all of my questions. There is some pretty good stuff on the craftsmen forum but I just want to make sure! Thanks in advance! Frank
