i was in tulsa for 3 days. i called wayne to listen to his toys. we talked more than we listened. i must say, the 10" driver behind the corner mid horn was interesting. that horn driver combination solves many mid range horn issues. i was & am impressed. i would like a shootout with that rig verses my modified khorns with tha tad 4001 driver in my room at my place, woodward, ok. any of you tulsa & close proximity audio buffs in for the challenge?? the distance is the same going to or coming from big t town. i fix a wicked grilled chicken with a special seasoning. so, guys & lona, too, let me know when to stoke the old grill.linkalley
