Subject: Re: Lining only opposite sides of a cabinet Posted by Wayne Parham on Fri, 27 Aug 2004 20:19:07 GMT View Forum Message <> Reply to Message

That's right. What we want to accomplish is attenuation of higher frequency standing waves. Hanging sheets of insulation suspended a little way from on wall would be a great way to do it, but it would also be harder to accomplish. The trick is to reduce higher frequency energies inside the cabinet without altering cabinet tuning too much.
