Subject: Heresy components and pi speakers ?

Hi, I currently have a pair of early Heresy speakers with good drivers. These speakers sound good, however, they really lack the bass response I am looking for. If it were just the bass, then I would just deal with it and be happy. However, the cabinets are falling apart and in need of replacement. So…Would it be possible (desirable) to mate the Heresy tweeters, squawkers and crossovers with say a 4pi LF driver and cabinet? Best regards,ck
