Hi wayne, Thanks for the Pi 8 & mid horn plan you sent, is the mid horn design to cut off at 150 low freq(hz) let say if I would do a 12-sided tractrix front horn what is the cut off fre I should go for ? you mentioned in one of your post that the vocal for male are especially good at around 130, do you think I can try cutting off at 100? Thanks Zeno gabriel
