Hi Adrian, Most of all many thanks for your explanation, they really enlighten me. I like the look of the Pi 8 as they look something like the V.O.T, I was just thinking it will look more interesting with a 12 sided horn as I can build them my self almost round but not round, I can't make the round horn, what I have in mind is same as the pi 8 but only the horn attach to the cabinet then I will build another 12 sided horn for the compression driver as well Zeno gabriel
