Subject: 18's for 10pi's

I see the 10pi's are designed for a 15-inch driver. Is it possible to "adapt" for an 18-inch woofer, which would mean making the woofer "box" bigger. A lot of times multiplying ALL the dimensions by 1.2 was the suggested way, but is that what is necessary here, or are using 18's just plain a bad idea. Thanks.John
