Subject: Pi Seven vs Pi Seven-18 Heighth

I'm considering the Professional Pi Seven or Seven-18 with all JBL drivers. I'm attracted to the Seven-18s for their greater bass reach and sensitivity, but have some concerns over the heighth of the Seven-18 vs the standard Seven. The Seven-18's bass module is nearly a foot taller at 46" placing the mid horn and tweeter horn well above ear level of a person seated 14' away. I have never owned horns, so my preconception is that the Seven-18 may present less upper mid and treble information when I am seated. I would like to know if my concerns are valid or not. Thanks Tom.
