Ok ... I'm screwing up the courage/determination to build Pi 8's. But in the meantime, how do I put my Alpha 10's to good use, quickly? I've got two sets of thrift store boxes, heavily built, from the '60's. One set is 1.65 ft3, the other set is 2.08ft3.I also have a pair of EV T-35's (not sure which version). Any suggestions for box tuning, xover with these HF horns? I might also go ahead and purchase the PSD2002 & horn combo, just to get going ...Thanks very much for any suggestions.Regards,Jim
