Got my 2Pi upgrade kits today. They're for an experiment Speakerman wants me to try: a pair of 12" Altec/University from his archives with the Vifa in a 4.5 cu ft sealed box. We figure if it has to be ported then it's just a matter of drilling another hole as there's no depth to the Tower port. I was amazed to find the O.S. dimensions of the Tower yield 5.5 cu ft! But by the time the bracing, Hardi-Backer a la Bob Brines and drivers are installed it should be closer to 4.5. Of course it has to stop raining on my alfresco workshop so I can build.
