Got my 2Pi upgrade kits today. They're for an experiment Speakerman wants me to try: a pair of 12" Altec/University from his archives with the Vifa in a 4.5 cu ft sealed box. We figure if it has to be ported then it's just a matter of drilling another hole as there's no depth to the Tower port.I was amazed to find the O.S. dimensions of the Tower yield 5.5 cu ft! But by the time the bracing, Hardi-Backer a la Bob Brines and drivers are installed it should be closer to 4.5. Of course it has to stop raining on my alfresco workshop so I can build.
