Wayne and Bill, My "woofer tester" is currently not running on the pc, but I had measured these back some time when everything worked with my woofer tester, and found out they are identical to the Altec 414 specs. From my memory: $f_s = 30\text{hz}$, $q_{ts} = .35$ $\text{eff} = 96\text{db}$ V_{as} = fuzzy memory says 10 to 20 cubic ft. Sorry I can't remember more than that. I do remember these measured same as Altec 414's as I measured the 414's and the (Altec/Utah???)'s at the same time and were identical. The 414's of course had cast frames and alnico magnets, the clones are (40 - 60 oz/ceramic) magnets, stamped frames. I don't frequent the Altec website much anymore so unsure, I have become a JBL junkie!Ron
