Subject: Thoughts on the Fostex FW305??

I thought I would try over here and see if anyone was familiar with the Fostex FW305. I'm looking for a LF driver to run up to around 200 hz or so where I'll bring in my Fostex fullranger. I know, a little different than the Pi Speakers, but I know there are a lot of knowledgable folks here that have a lot of experience with the larger efficient woofers.I'll most likely run in a ported configuration. I'd like these to reach down into the low 30's at least. Seems reasonable as the fs is 25 Hz, but perhaps I'm wrong. I'd appreciate any thoughts you'd like to share.Thanks in advance!!
