Has anyone ever used the Dayton PF385-8 in a front loaded horn or a pi aligned bass horn like the 7 pi? Its parameters are nearly identical to a klipsch K-33, but it has much greater power handling capability. The Peavey 1508-8 looks very similar to some of the JBL drivers recommended for bass horns. Does anyone have any experience with these? At first glance, either of these look as good as most of the eminence drivers and the Peavey is less than half the cost of a JBL. Any experiences or help would be very appreciated. Thanks for the help. Tom
