Had/Having a hell of a time dialing in the Great Plains 902B's. The quality is obviously there but I'm stubborn. Details of the crossover tribulashyons below but I finally went to a .33 MPP cap from a .47 kicking and screaming 'cause it wasn't from Audience. But that was it! 14dB. And then I rolled the new JJ/Tesla 6DJ8's with the Sovtek 6922's and Svetlana 6N1P's. The JJ's are so neutral! And the voices and instruments just float up there. Almost have attained the unobtainable: "New York Tenderberry" on vinyl is MAGNIFICENT! I knew it was but never got the sound the engineers were after. Laura Nyro isn't a novelty, she's one of the Top Five artists of the latter decades of the Twentieth. Yeah! And the SACD done just before her death, "Angel In the Dark", Oh my!!
