I'd run 2118's as mids in sealed cabinets larger than 0.3ft<sup>3</sup>. You could run them as little bass-reflex speakers in boxes from 0.1ft<sup>3</sup> to 0.5ft<sup>3</sup> tuned to 95Hz, I suppose. But f<sub>3</sub> doesn't get below 100Hz. PiAlign suggests 0.2ft<sup>3</sup>. For two drivers, double the box volume but keep the Helmholtz frequency at 95Hz.
