I'd run 2118's as mids in sealed cabinets larger than 0.3ft³. You could run them as little bass-reflex speakers in boxes from 0.1ft³ to 0.5ft³ tuned to 95Hz, I suppose. But f₃ doesn't get below 100Hz. PiAlign suggests 0.2ft³. For two drivers, double the box volume but keep the Helmholtz frequency at 95Hz.
