Hello from germanyMr.Parham,I`ve some questions about your SEVEN PI Audiophile:Is it right when I look at the plans of the vented Basscabinet that there is only 3/4 " free space between the inner port and front panel???Total inner Depth = 7.75" - 6.25" (port depth) - 0.75"(thickness of port duction)= 0.75"If I want to take the 2226 H, is tere a different in cabinet and crossover design?How much ohms may be the inner resist of the inductor coils in your crossover?Much greetings and thank you!Karl-Heinrich vom Dahl
