Hello, I finished building a pair of stage 4pi's using the eminence drivers. I just aquired a behringer dcx2496 digital crossover. I would like some info as to where to set the crossover points. I will be bi-amping using 60w tube mono blocs for the highs and a bryston 4b for lows. Any help would be greatly appreciated. I will post pics of speaks soon. Speak are finished in solid cherry and baltic birch.
